Professional Summary

I'm a curious AI engineer and Full Stack developer who loves turning messy problems into clean, working systems. With hands-on experience building production AI systems, agent-based platforms, and automation pipelines, I enjoy experimenting with LLMs, RAG systems, computer vision, and AI-driven video generation. Whether it's late-night debugging, creative brainstorming, or integrating modern AI tools into scalable cloud solutions, I bring logic, curiosity, and a bit of stubbornness to every challenge — always learning, always building, and occasionally over-engineering just for fun.

Education

FAST National University of Computer and Emerging Sciences, Islamabad 2021 – 2025
BACHELOR OF SCIENCE (COMPUTER SCIENCE)

Technical Skills and Interests

Languages: JavaScript, CSS, Python, C/C++, Dart, Yaml
Frameworks: LiveKit, Langchain, Next.js, React.js, Angular, Flutter
Cloud and Automation: n8n, AWS (EC2, AgentCore), Docker
Areas of Interest: AI Web Apps, Chatbots, Mobile Apps, RAGs, LLMs

Professional Experience

AI Engineer
Soft Techniques [🔗](#)

On-site
Sep 2025 - Ongoing

Soft Techniques is a custom AI solution provider that creates and personalizes AI product for specific user needs.

Voice Agent Platform (Alive5)

- Architected and deployed an AI-powered voice agent system with intelligent conversation flows, intent detection, and FAQ integration using LiveKit, OpenAI GPT-4o, and FastAPI, handling real-time voice interactions with 291+ available voices.
- Designed scalable agent workflows and initiated deployment on AWS AgentCore along with AWS server, to support modern, distributed, and scalable agent-based applications.
- Implemented telephony integrations (Telnyx) including SIP trunking, webhooks, and call transfer for production-grade voice handling.
- Built LiveChat and CRM integrations with Socket.io, enabling real-time messaging, automatic thread creation, and structured customer data capture.

AI Automation & Video Generation Pipelines (n8n)

- Designed and implemented end-to-end AI automation workflows using n8n, integrating external AI services and custom backends.
- Built automated AI video generation pipelines using:
 - Kie.ai's models like Google Veo, OpenAI Sora, and many more via API-driven orchestration.
 - ComfyUI-based video generation, including paid hosted models and experimental local pipelines
- Explored local ComfyUI training and pipeline setup, gaining hands-on understanding of diffusion workflows, model constraints, and GPU limitations; strategically deprioritized local training to meet strict client deadlines.

Stories We Tell Platform

- Built a full-stack AI-powered story development platform enabling conversational narrative creation.
- Developed intelligent extraction of structured story elements from conversations.
- Implemented multi-user sessions with authentication, persistence, and cross-device continuity.
- Delivered a real-time streaming chat experience with scalable backend APIs.

DisasterShield Platform

- Built a digital disaster recovery platform connecting homeowners with contractors and insurers.
- Implemented intelligent contractor matching based on location, expertise, and availability.
- Integrated secure payments, insurance claim (FNOL) processing, and document generation.
- Developed real-time notifications, role-based access control, and a mobile-first user experience.

Full Stack Software Engineer

Hybrid

VECTOR Inc. [🔗](#)

Feb 2025 - May 2025

VECTOR is an emerging leader in Generative AI, Computer Vision, and Full Stack Software Development, driving innovation across these cutting-edge domains.

- Spearheaded development and deployment of two flagship products at Vector AI: **VFit (Virtual Try-On)** and a **Height Estimation App** that uses computer vision to recommend clothing sizes. These solutions were successfully integrated into **Splendor**, an AI-powered eCommerce fashion store. I built the complete frontend architecture, handled containerization with **Docker**, and designed the deployment pipeline using **AWS EC2 g5.2xlarge**.
- In addition, I developed the official company website using **Wordpress Elementor Pro** and **UICore Pro** with a strong focus on performance, branding and UX.

Front-end Development Intern

Remote

Moqah.pk [🔗](#)

Nov 2024 - Jan 2025

Moqah.pk is a service that helps Users identify and manage **"Events"** so that they have full control of whatever events they are managing or looking forward to attend. I worked under Moqah team as a **Full Stack developer** with a prime focus on Frontend.

- I made **authentication flow** pages to make sure that the user can create a new account, login, and reset password with ease.
- I made a beautiful multi-directional Carousel of images to portray the ongoing events list under **Packages page**.
- I made Terms and Conditions page, Privacy Policy page, Refund Policy page, Cookies policy Page, and Event Details page.
- I also fixed some bugs in backend flow in related pages.
